Rural and Underserved Community Practice Program newsletter February 2001, Number 11

Expanding Rural Practice

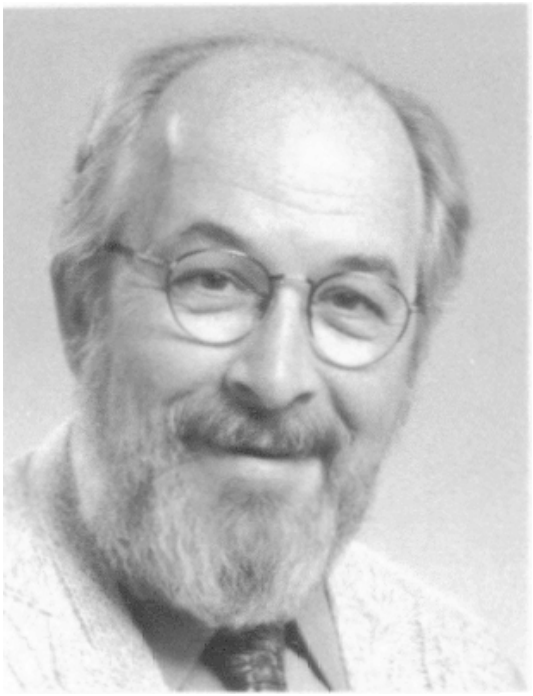
Dear Colleagues,

As my obstetrics workload diminishes in the face of competing time pressures and the engagement of newer and younger colleagues (Dr. Carl Wiebe has joined us from rural Manitoba), I take even greater pleasure in the annual "rebirth" of the Rural & Underserved Community Practice Program. This year is a special one for a couple of reasons.

The first cohort of students to complete their entire four years in the new curriculum are currently making their career choices in the CaRMS match. Undoubtedly, the experience that some of you gave them in the summer of 1999 will have influenced and aided the choices they are now making.

Secondly, we are optimistic that this year, for the first time, we will be able to provide some more tangible recognition and compensation for the hours of devoted work you expend in shaping the future interests and capacities of these physicians. Details remain to be worked out, but it appears likely that we will be able to channel funding from a couple of sources to provide preceptors with stipends or equivalent. We will be contacting you in the next few months to clarify what you might wish once we have the funding secured. It is our hope that this will be seen as a positive development. Although we cannot hope to monetize the major contributions you continue to make, it is very important that your idealistic contributions are recognized to the greatest ability available to us.

You may be aware of the preliminary plans for the expansion of the medical school (see article on p. 3) and I hope you are aware that your program is seen as an inspiration for the "Distributed Learning Model" that is envisioned. We all hope that this will foster the development of younger colleagues that can assist in the difficult but rewarding work that you do throughout the province and territories.



Dr. Bob Woollard, Rural Practice Program Director and Head of the Department of Family Practice at UBC

Interprofessional Elective in HIV/AIDS Care

The Interprofessional Elective in HIV/AIDS Care is a four-week interdisciplinary course offered in June as part of the Rural & Community Practice program. It takes place at St. Paul's Hospital conference centre and a number of community settings.

The elective is an Interprofessional course in that senior students in Medicine, Nursing, Pharmacy and Social Work all participate. Faculty from these disciplines provide the coordination and supervision.

The intention of this course is to prepare students to respond effectively, both as individuals and as members of a team, to the HIV/AIDS epidemic and its medical and social consequences.

Six students from each discipline form into teams for case study and interprofessional presentations.

The course includes: formal presentations, case studies, and field practice – both discipline-specific and cross-discipline, i.e. students spend time in a clinical setting with members of their own profession, with members of other disciplines, and with clinical teams providing care to those with HIV/AIDS.

Much of the course time is spent in the community in agencies and clinics such as St. Paul's Hospital HIV/AIDS ward, the Pacific AIDS Resource Centre, the Oak Tree Clinic, the Downtown South Community Health Centres, the street nurse program, and others. The Three Bridges Community Health Centre is a new and much expanded clinic which will play a major role in the clinical teaching of this course.

The course has received excellent reviews from students. Journals are written weekly and in the past have shown how much the students have learned and grown professionally and interprofessionally during the four weeks.

Further information is available from the Family Practice Undergraduate Program Office or Dr. Peter Granger at (604) 633-4234 or mpetergranger@cs.com.

"The Interdisciplinary HIV/AIDS course is a unique opportunity to work with and learn from students in nursing, social work and pharmacy. I found it to be an invaluable course in this regard.

Additionally, the HIV/AIDS education was exceptional as it balanced the latest in pharmacology and pathophysiology with the issues critical to caring with this challenging population.

I quickly recognized that we were learning an approach to patient care that is only referred to in medical school but never properly exemplified."

Steve Mathias
Student, HIV/AIDS Elective 1999

Plan aims to train more rural doctors

UBC builds partnerships with hospitals, other universities and clinics

Students will be able to spend up to half their medical education at universities and hospitals in other regions of the province, and enrolment will increase from the current 128 medical students to 200 by 2006, under a new plan proposed by UBC

The Provincial Medical Education Plan (PMEP) calls for partnerships with other B.C. universities to extend learning opportunities throughout the province and offer education and experiences relevant to health practice issues in rural and underserved areas.

The plan will increase medical school enrolment at UBC to address issues of education, supply and retention of doctors in B.C. and deal with the demographically driven doctor shortage

"This plan is a major step forward as B.C. takes responsibility for educating a greater proportion of the physicians needed by British Columbia. The community partnerships will ensure that graduates gain the skills and build the relationships that will suit them for practice in currently underserved areas," says Medicine Dean John Cairns.

As a first step, UBC and the University of Northern British Columbia (UNBC) announced a plan for a Northern Medical Program that will offer 15-20 medical students a year the opportunity to enrol in a rural medical education stream.

This northern program is designed to encourage rural, northern and aboriginal students to complete part of their medical education at UNBC.

"The Northern Medical Program ... creates the opportunity to train physicians in the North for practice in northern and rural communities," says Charles Jago, UNBC's president.

"UVic is strongly supportive of this system-wide approach," says Dr. David Turpin, president of the University of Victoria. "Our community's significant population of seniors provides some insight into the issues that Canada and its aging population will face. That, combined with UVic's research and teaching strengths in health-related fields, its involvement with the new cancer research program on Vancouver Island, and our Centre on Aging, will create 20 more spaces for medical education and provide those students with a solid grounding in some of the key issues of the future."

Untangling the Web

Rural Practice students last year performed an Internet literature search on a question posed by their preceptor or arising during their placement. The class had previously taken a workshop during second-year on formulating an "answerable" question and finding information on a clinical encounter in their Family Practice course.

The individual feedback students received greatly improved the searches they later conducted during Rural Practice. They shared their searches on the Rural Practice website, along with relevant citations and commentary, creating a diverse archive of interesting clinical questions and answers.

Mutual Exchange of Knowledge

Preceptors can tap their students' knowledge to learn hwo to find medical information online.

All preceptors receive full access to UBC Library online resources, including subscription-based services, full-text journals, and such article indexes as:

- OVID
- CINAHL
- HealthSTAR
- Health Reference Center - Academic
- MD Consult
- Medline
- EMBASE
- PubMed

Students posted Internet literature searches (such as the one above) to the Rural Practice website, creating a record of their experiences as well as a medical resource.

Real World Teaching

Preceptors' comments on the Rural & Community Practice Program

Every year, both doctors and students find the Rural & Community Practice Program a valuable and rewarding experience. Here are a few of the responses we received when we asked doctors what they found to be **"the strengths of the program"**:

"Excellent opportunity for students to learn and observe how family practice works in a rural setting…. Excellent program."

Dr. Tara Guthrie (Creston, BC):

"One-on-one preceptor-student interactions [are a] mutual learning experience."

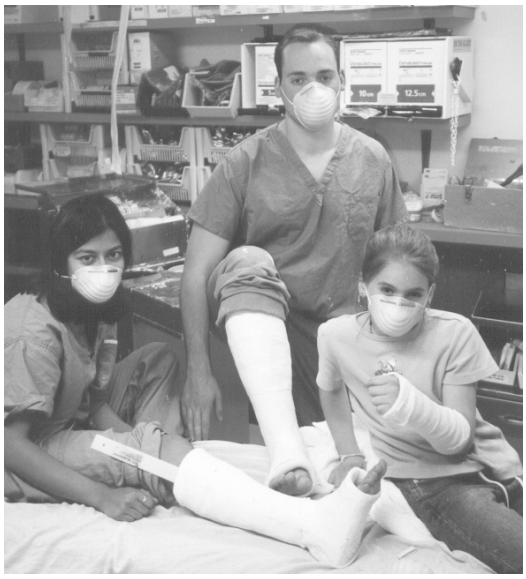
Dr. Daphne Robinson (Duncan, BC):

"Great opportunity for students to be exposed to a wide range of medical areas in a non-academic environment, with one-on-one learning."

Dr. R. Clark (Fernie, BC):

"Makes new and urban doctors aware of not only the rewards of the practice but also the obstacles faced here. Gives the student a real hands-on experience as there usually aren't enough hands available. I'm very impressed with the calibre of students from your program and I appreciate the knowledge and enthusiasm they bring along. It certainly revives old memories."

Dr. S. Secerbegovic (Watson Lake, YK):



Rural Practice students Sangita Kulkarni (left) and Todd Stevenson practice casting with the daughter of preceptor Dr. Douglas Nottebrock in Nelson, BC.

"Excellent opportunity for students to obtain 'real' community medical experience…. I encourage the department to keep it up."

Dr. Ray McIlwain (Bella Coola, BC):

"Early exposure to *real* rural practice, not just pathology, but 'how do you deal with problems in a rural setting', must help students with future planning for taking jobs in rural centres. Gives rural docs a prod back toward learning too."

Dr. Hugh Fisher (Pemberton, BC):

"It gets 'city people' out into rural areas of BC (the majority of the province's space) and introduces them to medicine and rural lifestyle, which is a major attraction to many people who have never really lived outside of urban centres.... I think this is a *very good* program and needs to be expanded."

Dr. Craig S. Jackson (Armstrong, BC):

"[Strengths of the program include:] The preparation of the Faculty in making it smooth, and the enthusiasm of the student who seemed very well apprised of what was expected."

Dr. Douglas McGregor (Vernon, BC):

"An excellent introduction to trying to reduce student temerity at the prospect of working in a less serviced and less well backed-up community. I will continue to support this program as being absolutely vital to help our manpower situations in the interior communities."

Dr. Paul R. Walker (Nelson, BC):

"I am hopeful that students may gain a favourable impression of rural practice to the extent that they will be keen on establishing themselves in a rural practice on graduation. I was pleased to be associated with this program."

Dr. Paul Stent (Fort St. James, BC):

"Excellent exposure to 'real' practice…. This is the *most* appropriate means to introduce students to rural practice. This is an excellent model of rural recruitment and introduction for medical students."

Dr. D. Butcher (Yellowknife, NT):

Learning in the field

Excerpts from last year's student evaluations

The following excerpts from student evaluations of their Rural Practice experience last year clearly show the value and sometimes life-changing impact of the program for physicians in training:

"The experience I had in Armstrong was one I will never forget. Although the opportunity to learn medicine was great, the experience encompassed so much more than illness and disease. Dr. Rutherford and Dr. Sherwin are both supportive and caring individuals who welcomed me into their community from day one. They were always willing to teach and will allow you to explore whatever interests you might have."

Matt Dickson, Armstrong (Dr. Rick Sherwin)

"Total immersion made this one incredible four weeks. Certainly has convinced me that rural practice is probably for me."

Rebecca Morley, Creston (Dr. Lance Iverson)

"All of the doctors and nurses whom I had the opportunity to spend time with were very receptive to my being there and were all willing to help me learn. I was given the opportunity to spend time in a variety of areas and was allowed as much hands-on involvement as I wanted. I was provided with meals and accommodation at the hospital - staying within the hospital made it very easy to get involved with anything going on in the ER or labour and delivery, for example."

Janet Middelkamp, Dawson Creek (Dr. Steve Ashwell)

"Dr. Robinson is a great teacher and you can tell that she really cares for her patients. Her practice has a very good mix of Prenatals, Pediatrics, Geriatrics, Obstetrics, Psychiatric and also a good balance of men and women. So it's a valuable office experience and very different from Family Practice in the city."

Carley Cooper, Duncan (Dr. Daphne Robinson)

"The experience was great. I'd spend the mornings in an FP office and the afternoons in the ER. I rotated through a bunch of FP offices, which was great to see everyone's different styles.... It was really fun, the doctors were all so nice and interested in teaching. It was great - I can't say that enough."

Jessica Haussman, Fort St. John (Dr. K. Page)

"I had an absolutely WONDERFUL rural practice. The Cowichan medical community is pleasant, diverse and receptive to teaching students. My experience with Dr. Gallagher was also wonderful - he fulfilled the role of a mentor and teacher perfectly. There was ample patient contact. This is an excellent setting to become comfortable with physical exams and history taking skills, as well as learning practical skills such as suturing and IV's.... I didn't expect my rural experience to be nearly as exceptional as it was."

Christine Singh, Mill Bay (Dr. L. P. Gallagher)

Student Paris-Ann Gfeller (second from left) out fishing just for the halibut with doctors and nurses from Queen Charlotte City.

Fundraising for Rural Practice 2001

Shane Seal
President
UBC Medical Class of 2003

The class of 2003 has been busy fundraising for our summer experiences. We started in September by selling Entertainment 2001 books, and raised nearly $1000. In October we sold T-shirts designed by a 2nd year dental student colleague, which was equally successful. In November we participated in the annual alumni phoning campaign, which was immensely helpful once again. Perhaps we called you! And before Christmas, as if exams weren't enough to keep us busy, we organised a more extensive clothing drive selling sweatshirts, fleeces, golf shirts, and more, raising nearly $1500.

The new year has us deeply engrossed in our Brain and Behaviour block, yet fundraising efforts are still ongoing, thanks to the direction of Adrienne Weeks, Feisal Mohammedeli, Tasha Ellchuck, and many others. Hot dog lunches, Friday night parties, and other social functions will occur or already have with proceeds going to our joint cause. Due to the success of the December clothing drive, we're extending it to a spring drive with the addition of new clothing items. Check out our website:

http://members.home.net/dwyiu

Thanks for your support, we are really looking forward to the end of fundraising and the chance to actually be able to meet some of you!

The People Who Make It Possible

We gratefully acknowledge the following individuals and organizations who have contributed to the success of the Rural Summer Placements program from December 1, 1999 to November 31, 2000.

We would also like to express our appreciation to those donors who wished to remain anonymous.
