MICROORGANISMS PATHOGENIC FOR HUMANS

III FUNGI

Organisms (classified by location)	**Main habitat & mode of encounter**	**Disease(s) in humans**	**Clinical features**	**Laboratory features (tests ordered)**	**Main pathogenic mechanism**	**Treatment**
SUPERFICIAL OR CUTANEOUS						
Malassezia furfur						
Microsporum canis *M. audouinii*						
Trichophyton mentogrophytes *T. rubrum*						
Epidermophyton floccosum						
Candida albicans (note: can also be sytemic)						
Exophiala werneckii						
SUBCUTANEOUS						
Sporothrix schenckii						
Phialophora						
Cladosporium						

Fonsecaea pedrosoi						
SYSTEMIC AND/OR TISSUE SPECIFIC						
Histoplasma capsulatum						
Blastomyces dermatidis						
Coccidioides immitis						
Paracoccidioides brasiliensis						
Candida albicans						
Cryptococcus neoformans						
Aspergillus fumigatus *A. flavus* *A. niger*						
Pneumocystis carinii						
Zygomyces spp.						

Mucor spp.						
Rhizopus						
Rhizomucor
